About TDK

TDK Corporation was established in 1935 as the world’s first company to commercialize a magnetic material called ferrite. In the ensuing years, TDK has developed and commercialized a host of other materials and products. This drive is based on the company’s founding spirit of “Contribute to culture and industry through creativity.”

Looking ahead, TDK is determined to further refine its materials, process, and evaluation & simulation technologies—its core technologies—aiming to be an Exciting Company, a consummate e-material solution provider that delivers with perfect timing products imbuing value that customers want.
There is no question that TDK’s results are improving. But it is difficult to say that we are on a path to growth when the recovery was principally the result of two years of structural reforms. But we are determined to achieve more.
